Garden City 2576

September 1947

THE STOCK offered in this list has been carefully grown and processed in nutrient treated sterilized soil. Only parts of healthy and selected strains are used in propagation.

CHEMICAL LABORATORY on the premises is used to make our own hormones and nutrients to suit all varieties of plants.

EXPERIMENTAL GREENHOUSE is used for extensive comparative tests and research to determine best and most satisfactory ways of producing plants. Mass production is started only after proven results.

NEW GREENHOUSES with many innovations facilitate the production of more and better plants.

OUR PRODUCTS—For years we have grown Magnolias on their own roots. We have added Pink flowering and other Dogwood varieties, also Japanese Maple, Azalea mucronulatum, ghent and other difficult varieties. We also produce Rhododendron hybrid and Alpine varieties from stem cuttings. We aim to reduce grafting to a minimum to overcome suckering, graft weaknesses and diseases.

DESIRABLE ITEMS you wish propagated—write us, we may be able to root quantities for you after making a small test.

VISIT US. Our plant factory is fast becoming a mecca for Horticulturists and Nurserymen.

Awaiting your valued orders.
